To Whom it May Concern:

Allegheny Mountain Rescue Group Suction Unit

This is to certify that I find that, for the purposes of Allegheny Mountain Rescue Group's Quick Response Service EMS equipment, that a V-Vac is the equivalent of the standardly-specified suction devices. I further find that, for the purposes of AMRG usual QRS role, that such a mechanical device that does not require AC current, DC current, or a battery that may fail from long disuse, is superior to the standardly-specified devices. I further attest that I have one of these units myself and have used it in actual field situations and can attest to its adequate performance.

Thank you.

Yours aye,

., FACEP

Medical Director, Allegheny Mountain Rescue Group
